Boat and streams

1.a man can row upstream at 7 km/hr and downstream at 10 km/hr .find man's rate in still water and the rate of current ?

1.6 and 5 2.8.5 and 1.5 3.7 and 2.5 4.none of these

2. speed of a boat in still water is 7.5 k/h if the speed of stream is 1.5 k/h the total time taken by the boat along the stream and against the stream is 5/6 hour .find the distance .

1. 9km 2.6 km 3.3km 4.5km

3.a boy takes 3 hours 45 min to cover a distance of 15km along the stream and 2 hours 30 min to cover the distance of 5 km against the stream .find the speed of the current in km/hr

1. 2k/h 2.1 k/h 3.5k/h 4.7k/h

4. a boat running downstream covers a distance of 16 km in 2 hours while for covering

the same distance upstream ,it takes 4 hours .what is the speed of the boat in still water ?

1. 4 k/h 2.6 k/h 3.8 k/h 4. None of these

5. a boat can travel a distance 10 km in an hour against the stream whereas 20km In an hour with the stream ,hence find the speed of boat in still water

1. 15 k/h 2. 22 k/h 3.20 k/h 4.25 k/h

6. a steamer with speed 15 k/h in still water travels 30 km downstream and returns in 4 hours 30 minutes . the speed of current is

1. 5 k/h 2.7 k/h 3.9 k/h 4.11 k/h

7. speed of boat in still water is 9 k/h and the speed of current is 1.5 k/h a boat can travel to a place at a distance of 105 km and return to the starting point .the total time taken by the boat is

1. 16 hrs 2.18 hrs 3.20 hrs 4.24 hrs

8.a man travels 2 km upstream n 60 minutes and 1 km downstream in 10 minutes .

find the time taken by boat to cover a distance of 5 km n still water ?

1.40 min   2. 60 min   3. 1hr 15 min   4. None of these

9. a man takes double time to swim upstream a certain distance as compared to the time taken to cover the same distance in downstream .the ratio of speed of boat in still water to that of speed of current is

1. 2:1   2.3:1   3.3:2   4.4:3
