

Setup Hadoop on Windows 11

1. Download Java SDK, JRE and **hadoop.rar** from <https://drive.google.com/drive/folders/11nMEChq2-kCsOsyW51Y4n11jzAH9Be5?usp=sharing>
2. Extract **hadoop.rar** to C drive, **C:\hadoop**
3. Install Java SDK and JRE
4. Create Environment Variables for JAVA_HOME & HADOOP_HOME

5. Download **msvcr120.dll** and copy in C:\windows\system32
6. Run Command Prompt as Administrator
7. Launch Hadoop Cluster from C Drive
 - `hdfs namenode -format`
 - `start-dfs.cmd`
 - `start-yarn.cmd`
8. Open Browser and Launch below sites for
 - Name node web page: [hΣp://localhost:9870/dfshealth.html](http://localhost:9870/dfshealth.html)
 - Data node web page: [hΣp://localhost:9864/datanode.html](http://localhost:9864/datanode.html)
 - Yarn web page: [hΣp://localhost:8088/cluster](http://localhost:8088/cluster)

HDFS Commands

1 Start HDFS `start-dfs.cmd` 2 Stop HDFS `stop-dfs.cmd` 3

List Files in HDFS `hdfs dfs -ls /` 4 Create a Directory `hdfs`

`dfs -mkdir /input`

5 Copy a File from HDFS to Local
File System

`hdfs dfs -put`

`c:\hadoop\exercices\input.txt /input`

6 Copy a File from HDFS to Local
File System

`hdfs dfs -get /input/input.txt`

`C:\hadoop\exercices`

7 Move a File within HDFS `hdfs dfs -mv c:\hadoop\exercices\input.txt`
`/input/input.txt`

8 Remove a File from HDFS `hdfs dfs -rm /input/input.txt` 9 Remove
a Directory from HDFS `hdfs dfs -rm -r /input`

10 Display Content of a File `hdfs dfs -cat /input/input.txt` 11 Display
the First Few Lines of a File `hdfs dfs -head /input/input.txt` 12 Display
the Last Few Lines of a File `hdfs dfs -tail /input/input.txt` 13 Check
File System Disk Usage `hdfs dfs -du -h /input`

14 Check Space Quotas `hdfs dfs -count -q /input`

15 Set Permissions `hdfs dfs -chmod 755 /input`

16	Set ReplicaOn Factor	<code>hdfs dfs -setrep -w 3 /input/input.txt</code>
