

TEST PLAN FOR WALMART APPLICATION

Name: Subhapreet Patro

Roll No.: 2211CS010547

Section: I

1. Test Plan Identifier

- Test Plan ID: WMT-TST-001
 - Version: 1.0
 - Date: July 1, 2025
-

2. Introduction

This test plan defines the strategy and approach for testing the Walmart application (web and mobile) to ensure a seamless, secure, and scalable shopping experience for end-users.

3. Test Objectives

- Verify core functionalities like product search, cart, checkout, and payments.
 - Ensure cross-platform compatibility (Android, iOS, Web).
 - Validate performance under high user load.
 - Check security features like secure login and payment encryption.
 - Ensure usability, accessibility, and localization support.
-

4. Scope of Testing

In Scope:

- User registration and login
- Product search and filter
- Cart and wishlist management
- Checkout and payment processing
- Order tracking and cancellation
- Push notifications and email alerts
- Profile and address management
- Admin product and order dashboard (internal use)

Out of Scope:

- Backend database testing (covered under integration testing)
 - Third-party integrations (e.g., PayPal APIs) beyond functional response
-

5. Test Approach

Testing will be performed using both **manual and automated techniques**. The agile model will be followed with testing included in each sprint.

6. Test Types

- ☒ **Functional Testing**
 - ☒ **UI/UX Testing**
 - ☒ **Regression Testing**
 - ☒ **Smoke/Sanity Testing**
 - ☒ **Performance Testing**
 - ☒ **Security Testing**
 - ☒ **Compatibility Testing**
 - ☒ **Localization Testing**
-

7. Test Deliverables

- Test Plan Document
 - Test Cases and Test Scenarios
 - Test Execution Reports
 - Bug Reports and Logs
 - Traceability Matrix
 - Final Test Summary Report
-

8. Test Environment

- **Devices:** Android (10+), iOS (14+), Web (Chrome, Firefox, Safari)
 - **Tools:**
 - Test Management: Jira, TestRail
 - Automation: Selenium (Web), Appium (Mobile)
 - Performance: JMeter, LoadRunner
 - Security: OWASP ZAP, Burp Suite
-

9. Entry and Exit Criteria

☒ **Entry Criteria:**

- Functional specifications signed off
- Test cases written and reviewed
- Test environment set up and stable

☒ **Exit Criteria:**

- All critical and high-severity bugs are closed
 - Regression testing completed
 - All test cases executed with 95%+ pass rate
-

10. Testing Schedule

Phase	Duration	Description
Requirement Analysis	2 days	Understanding features
Test Case Design	3 days	Writing and reviewing test cases
Test Execution	7 days	Running tests
Bug Fixing & Retesting	4 days	Regression and validation
Final Sign-off	1 day	Reporting and approval

11. Team Roles & Responsibilities

Role	Name	Responsibility
Test Lead	John Doe	Overall test ownership
QA Engineers	Team QA	Test case creation and execution
Automation Tester	Jane Smith	Maintain automation suite
Performance Tester	Raj Verma	Conduct load and stress tests
Dev Team	-	Fix defects
Product Owner	-	Requirement clarification

12. Risks & Mitigation

Risk	Impact	Mitigation
Delay in requirements	High	Weekly meetings for early clarification
Third-party API failures	Medium	Mock services for testing
Device fragmentation	High	Use cloud testing platforms (e.g., BrowserStack)

13. Approval

- QA Lead: ✓
 - Product Manager: ✓
 - Dev Lead: ✓
-
