

ACT Unit 2 Case Study

Create a Poster/PPT about the differences between website and web portal

Website

- A collection of web pages that are hosted on a single domain.
- Can be accessed by anyone with an internet connection.
- Typically has a static or semi-static content.
- Is owned and managed by an individual or organization.

Web Portal

- A gateway to a variety of information and services.
- Requires users to log in to access the content.
- Typically has dynamic content that is updated frequently.
- Is often user-centric, allowing users to interact with the portal.

Comparison

Feature	Website	Web Portal
Accessibility	Anyone can access	Requires login
Content	Static or semi-static	Dynamic
Ownership	Individual or organization	User-centric
Purpose	To provide information or services	To provide a gateway to information and services

drive_spreadsheetExport to Sheets

Examples

- Website: www.google.com
- Web Portal: www.mybank.com
- Web Portal: www.amazon.com

Conclusion

Websites and web portals are both web-based applications, but they have different purposes and features. Websites are typically used to provide information or services to a wide audience, while web portals are used to provide a gateway to a variety of information and services for a specific audience.

Additional Information

- A website can be considered a type of web portal, but not all web portals are websites.
- The terms "web portal" and "gateway" are often used interchangeably.
- Web portals are becoming increasingly popular as a way to provide users with a single point of access to a variety of information and services.
