

UNIT-5

Future scope of AI, ML, DL, DS in various fields

Name: Subhapreet Patro

Class: CSE Zeta

Roll No.: 2211CS010547

Introduction

Welcome to the presentation on *Unleashing the Potential: Exploring the Future Scope of AI, ML, DL, and DS across Diverse Domains*. Today, we will delve into the cutting-edge technologies revolutionizing industries. From *Artificial Intelligence (AI)* to *Machine Learning (ML)*, *Deep Learning (DL)*, and *Data Science (DS)*, we will uncover their immense potential. Let's embark on this exciting journey!

Artificial Intelligence (AI)

AI, the simulation of human intelligence in machines, is reshaping industries worldwide. From *autonomous vehicles* to *virtual assistants*, AI is revolutionizing how we live and work. The potential applications are vast, ranging from *healthcare* to *finance* and *manufacturing*. AI algorithms analyze vast amounts of data to make intelligent decisions, enabling businesses to optimize processes and enhance customer experiences.

Machine Learning (ML)

ML, a subset of AI, empowers machines to learn from data and improve their performance over time. With ML, businesses can automatically *detect patterns, make predictions, and automate tasks*. From *recommendation systems to fraud detection*, ML algorithms are transforming various domains. As data volumes continue to grow, ML algorithms become even more powerful in extracting valuable insights and driving innovation.

Deep Learning (DL)

DL, inspired by the human brain's neural networks, enables machines to learn hierarchical representations of data. Its use of *neural networks* with multiple layers allows for complex pattern recognition and understanding. DL has revolutionized fields such as *computer vision* and *natural language processing*. Applications like *image recognition* and *voice assistants* showcase the vast potential of DL in transforming industries.

Data Science (DS)

DS combines various techniques and tools to extract insights and knowledge from data. It involves *data cleaning*, *data analysis*, and *data visualization*. DS enables organizations to make data-driven decisions, uncover hidden patterns, and gain a competitive edge. By applying statistical models and advanced algorithms, DS empowers businesses across diverse domains, including *marketing*, *finance*, and *healthcare*.

Conclusion

In conclusion, the future scope of AI, ML, DL, and DS is incredibly promising. These technologies are transforming industries, revolutionizing how we live and work. From enhancing customer experiences to optimizing processes and enabling data-driven decision-making, their potential is vast. As we embrace these technologies, we pave the way for a more intelligent and efficient future. Thank you for joining us on this exploration of the future scope of AI, ML, DL, and DS.

UNIT-5

Conducting a survey using Google forma and generating pictorial reports using Google sheets

Name: Subhapreet Patro

Class: CSE Zeta

Roll No.: 2211CS010547

Introduction

Google Forms and Google Sheets are two powerful tools that can greatly enhance data collection and visualization. While the original content is not directly related to these specific tools, I can provide an introduction to them for you.

Google Forms is a free online tool provided by Google that allows users to create customizable surveys and questionnaires. With Google Forms, you can easily design and distribute surveys, collect responses in real-time, and analyze the data all in one place.

Creating a survey with Google forms

Start by logging into your Google account and opening Google Forms.

Use the different question types available in Google Forms to create your survey questions.

Customize the design and settings of your survey to fit your needs.

A screenshot of the Google Forms editor interface. The top navigation bar is purple with the text "Untitled form" on the left and three icons (star, paw print, eye) on the right. Below the bar, there are two tabs: "QUESTIONS" (active) and "RESPONSES". The main content area shows a form titled "Untitled form" with a "Form description" field. Below this is a question titled "Untitled Question" with a "Multiple choice" type selector. The question has two options: "Option 1" and "Add option or ADD 'OTHER'". At the bottom right, there are icons for duplicating, deleting, and a "Required" toggle switch.

Distributing the survey

Share the survey link via email, social media, or embed it on your website.

Keep track of responses in real-time as they come in.

Set up email notifications to receive updates when new responses are submitted.

Collecting Data with Google Forms

Respondents can easily fill out the survey on any device with an internet connection.

Google Forms automatically collects and organizes responses in a Google Sheets spreadsheet.

Responses can be viewed in the Google Forms interface or directly in Google Sheets.

Sheet1					

Analyzing survey responses in Google sheets

Open the Google Sheets spreadsheet that contains the survey responses.

Use built-in functions, formulas, and filters to analyze the data.

Create charts, graphs, and pivot tables to visualize the survey results.

G	H	I	J	K	L
Product	Quantity Sold				
TVs	2,304				
Cell Phones	1,450				
Assessories	3,234				
Laptops	943				

Generating pictorial reports

Use the data from Google Sheets to create pictorial reports.

Utilize the various chart options available in Google Sheets to represent the survey data visually.

Customize the design and layout of your reports to make them visually appealing.

Done

Sharing and presenting Reports

Share your reports with others by giving them viewing or editing access.

Present your reports using Google slides or download them as PDFs or images.

Collaborate with others in real-time on the reports for seamless teamwork.

Conclusion

Conducting surveys using Google Forms and generating pictorial reports using Google Sheets is an efficient and user-friendly process. The integration between Google Forms and Google Sheets allows for seamless data collection and analysis. Utilize the power of Google's suite of tools to gain valuable insights from survey responses and effectively communicate them through visual reports.
